AURANGBAD**

PROJECT REPORT

ON

“Weather Application”

Submitted By

**Mr.Ayush Lingayat , Miss.Akshita
Warade & Miss.Shruti Kulkarni**

**MCA (Management)
II Semester**

Guided By

Miss Deepali Khedkar

Submitted To

**Institute of management studies and information technology,
Aurangabad 431005.**

(2024-2025).

Maratha Shikshan Sanstha's
Institute Of Management Studies & Information Technology

CERTIFICATE

We hereby certify that the project title “**The Weather Application**” is submitted by **Mr.Ayush Lingayat , Miss. Akshita Warade & Miss.Shruti Kulkarni** confirms to acceptable standards and is adequate in scope and quantity in partial fulfilment of requirements for the Master of Computer Application of Institute of Management Studies & Information Technology, affiliated to **Dr. Babasaheb Ambedkar Marathwada University, Aurangabad.**

Dr. Ashok Gaikwad

.....

ACKNOWLEDGEMENT

Many people have contributed in some or the other forms to this project, although my name appears on the cover of this project. I could not have done this Case Study without the assistance or support of each of the following. I thank to all of them.

I wish to place on record my deep sense of gratitude towards my project guide **Miss. Deepali Khedkar** for the constant motivation and valuable help through the project. I also want to express gratitude towards our Head of the department **Director Ashok Gaikwad**, for his invaluable guidance, insightful advice and continuous encouragement

I also thank those who have directly as well as indirectly supported me for the completion of this Project.

Thank you

Mr. Ayush Lingayat

Miss Akshita Warade

Miss Shruti Kulkarni

1. INTRODUCTION

1.1 Introduction

Our Project is usually Weather Application website where you can access the weather information just by simply typing the state in the search box .

You can get the Temperature , Humidity and Wind Information of the particular state in seconds using a Weather Application Website.

Our Weather Application Website offers a user-friendly Interface so that it is easy and more interactive to user.

We have build a good looking navigation bar which will attract the user using the website. Lastly this website is build using teamwork and all the credit goes to respective teammates

1.2 Existing System & Need for System

The system must be evaluated from the technical point of view first. The project should be developed such that the necessary function and performance are achieved within the less. Need for System:-

- To save Time.
- To use less man power.
- Easy to do Reservation.

1.3 Scope of Work

Designing and usually apelling user interface that displays weather information in clear and understanding manner

Creating interactive elements such as buttons menus and search bar for user interaction

Display current user location for current weather condition

Implementing error handling for network issues

Gathering feedback from user to and improve the app user experience

Showing each location weather details inside our country India

The scope of a weather application can vary depending on its target audience, features and intended use. The primary scope of weather application is to provide users with accurate and up-to-date weather information. This includes current conditions such as temperature, humidity and wind speed

1.4 Operating environments Hardware and Software Requirements

In a computer the operating environment includes temperature and so on affecting circuitry but in particular the term is often used to describe the nonphysical environment in which software runs. This many apply to application software with which interact, comprising the “look and feel” of the system, its appearance and the things that have to be done to achieve results. The term may also apply to system software designed for a UNIX environment will do things different than in a Microsoft Window environment. A UNIX shell with its look and feel and functionality.

“Operating environment” is not the totality of the functionality and appearance of an operating system

Software Requirements.

- **Operating system used :** Windows 11
- **Library Used :** Bootstrap
- **Development :** HTML , CSS
- **Language :** JavaScript
- **Version Control :** Git and GitHub

Hardware Requirement

- 1.3 GHz processor
- 8 GB RAM
- 100 GB hard disk
- 15” color Monitor
- Keyboard

Detailed Description of Technology Used:

Front end development is the area of web development that focuses on the user interface. It is all about converting the backend code into a graphical interface. The front end makes the data easy to read and understand.

HTML:

HTML stands for Hyper Text Markup Language. It is used to design web pages using markup language. HTML is the combination of Hypertext and Markup language. Hypertext defines the link between the web pages. Markup language is used to define the text document within tag which defines the structure of web pages. This language is used to annotate (make notes for the computer) text so that a machine can understand it and manipulate text accordingly. Most of markup (e.g., HTML) languages are human readable. Language uses tags to define what manipulation has to be done on the text.

CSS:

Cascading Style Sheets, fondly referred to as CSS, is a simple design language intended to simplify the process of making web pages presentable.

CSS handles the look and feel part of a web page. Using CSS, you can control the color of the text, the style of fonts, the spacing between paragraphs, how columns are sized and laid out, what background images or colors are used, layout designs, and variations in display for different devices and screen sizes as well as a variety of other effects.

CSS is easy to learn and understand but it provides powerful control over the presentation of an HTML document. Most commonly, CSS is combined with the markup languages HTML or XHTML.

JAVASCRIPT:

JavaScript is a lightweight, interpreted programming language. It is designed for creating network-centric applications. It is complimentary to and integrated with Java. JavaScript is very easy to implement because it is integrated with HTML. It is open and cross-platform.

JavaScript is a MUST for students and working professionals to become a great Software Engineer especially when they are working in Web Development Domain.

JavaScript is the most popular programming language in the world and that makes it a programmer's great choice. Once you learnt JavaScript, it helps you developing great front-end as well as back-end software's using different JavaScript based frameworks like jQuery, Node.JS etc.

2 PROPOSED SYSTEM

2.1 Proposed system

SkyCast is user friendly and comprehensive weather application design to provide accurate and up-to date weather information to users worldwide.

This application aims to offer a seamless experience combining advance weather forecasting technology with an good user interface. Weatherwise provide real time weather updates ensuring that user have access to the latest information on temperature

Weatherwise seamlessly integrates with wearable devices such as smartwatches , providing users with instant access to weather information on the go

Advantages:

- Faster and efficient result of weather searches
- Highly Secure and Portable application
- Provide with accurate forecast
- Provide real time updates
- User can stay informed about weather conditions

2.2 Objective of system

The objective of weather application is to provide users with accurate and timely weather information including forecasts , real time updates and alerts to help them plan activities stay safe and make informed decisions based on current and future weather conditions

The primary objective of a weather application is to empower users with comprehensive and reliable weather information. By offering accurate forecasts , real-time updates and alerts these applications enable users to plan their daily activities whether its deciding what to wear scheduling outdoor events or preparing for the travel

Weather application aims to enhance safety by providing timely warnings for severe weather events such as storms or hurricanes allowing users to take necessary precautions

The overall goal is to offer a convenient and accessible platform for users to stay informed about weather conditions helping them make informed decisions and navigate their daily lives more effectively.

2.3 User Requirement:

Users expect the application to provide accurate forecasts for their current location or any specified location. This includes information on temperature , humidity wind speed precipitation and other relevant weather parameters

Users want real time updates on weather conditions ensuring that they have the latest information available to plan their activities accordingly.

Users prefer customizable options to tailor the applications to their preferences such as choosing between Celsius and Fahrenheit selecting units of measurement and setting weather alert preferences

Users expect the application to have an intuitive and user-friendly interface that makes it easy to navigate view weather information and access various features without difficulty.

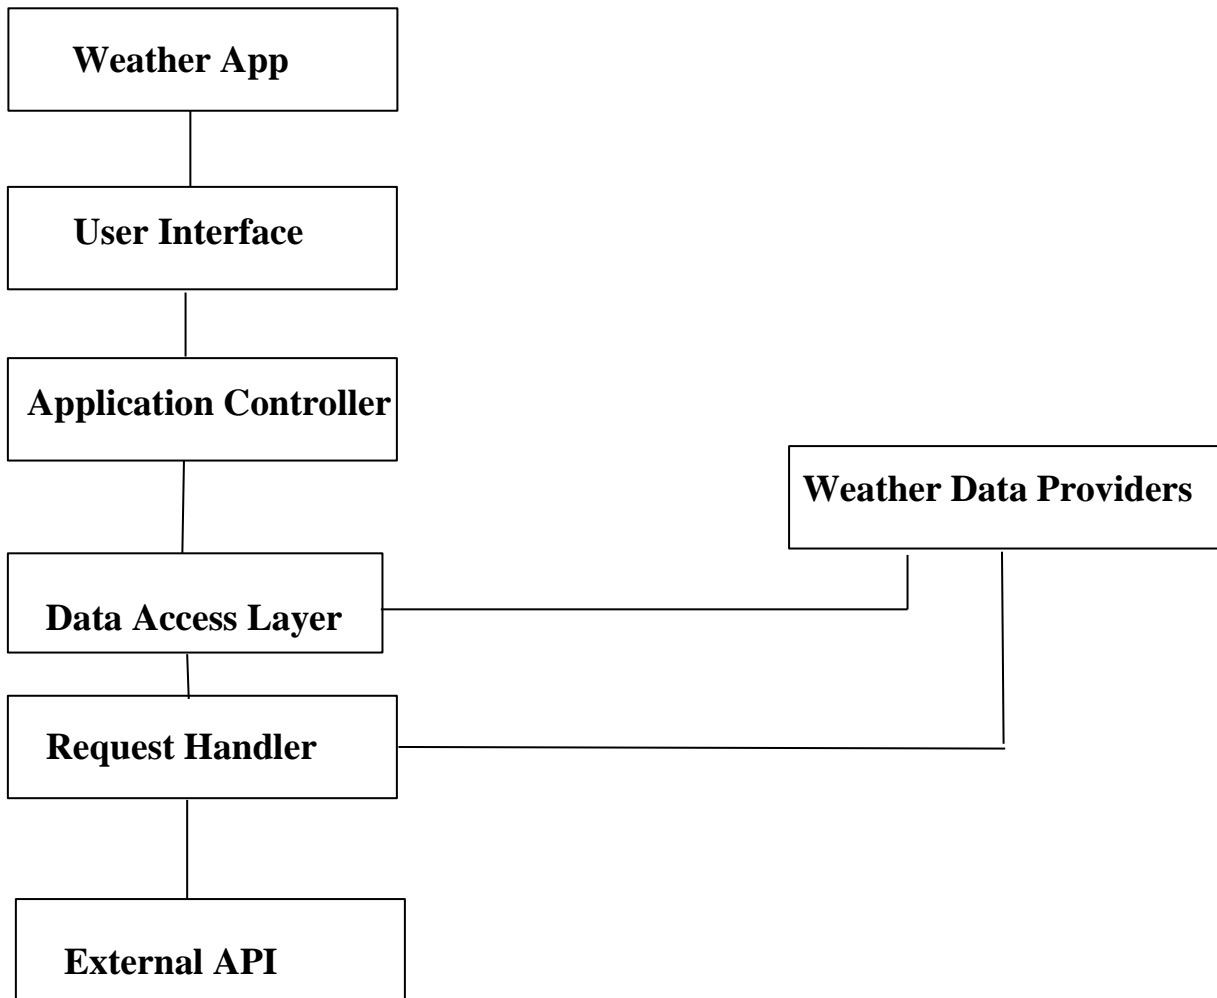

3 ANALYSIS & REPORT

3.1 Data Flow Diagram

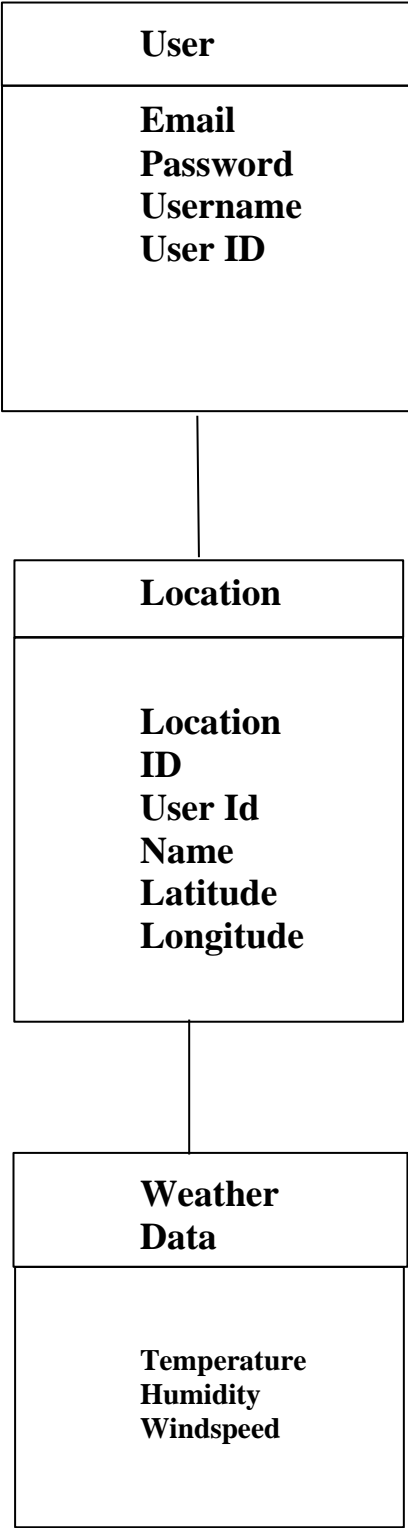

Level 0:

Level 1:

3.2 Entity Relationship Diagram (ER-diagram)

3.3 Feasibility Report

Technical Feasibility :

1. Evaluate if the required hardware and software infrastructure are available or can be acquired within the project's budget
2. Assess the availability and reliability of weather data sources and APIs needed for the application

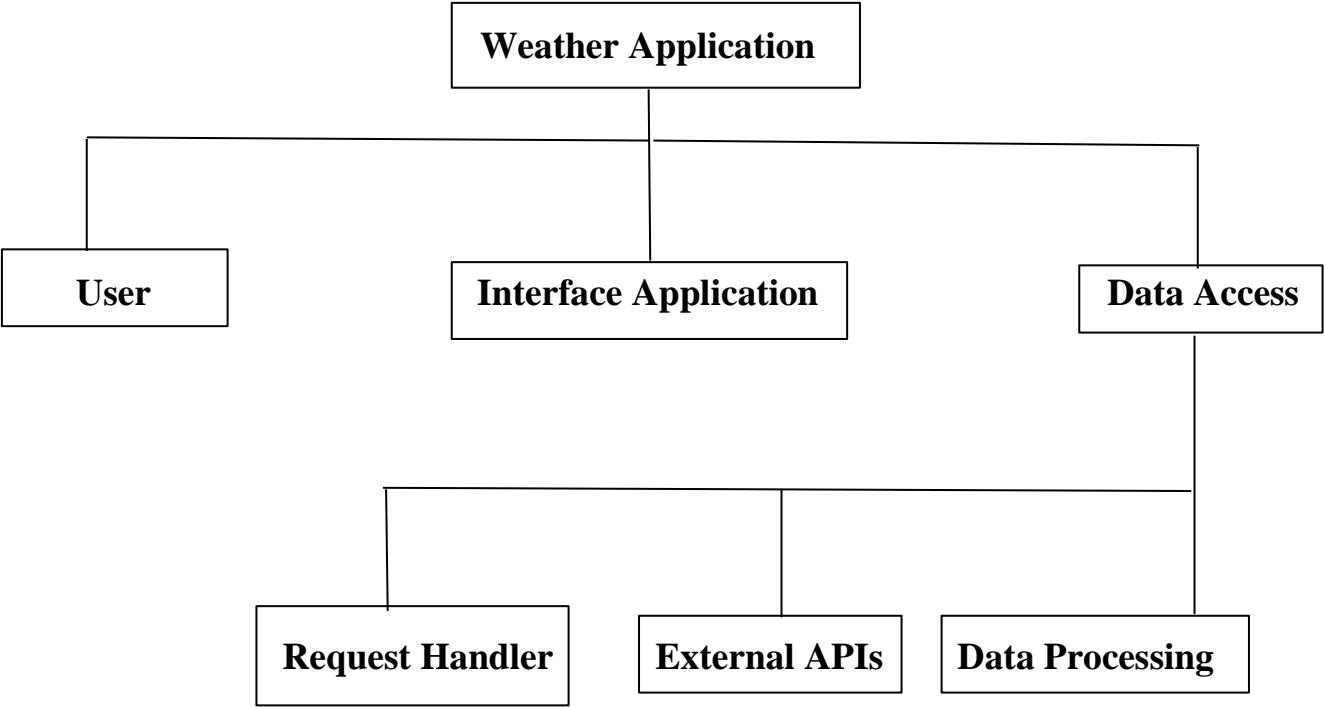

Economic Feasibility:

1. Cost Benefit Analysis : Estimate the development costs , including hardware , software personal , and maintenance expenses and compare them with the potential benefits and revenue generation opportunities
2. Revenue Model : Explore potential revenue streams such as advertising , subscription fees , premium features , or partnerships with other services

Operational Feasibility:

1. User Requirements : Analyze user needs and preferences to ensure that the application meets their expectations and provide value.
2. Scalability : Assess the application's ability to handle increasing user demand and data processing requirements as it scales over time.

5. CONCLUSION

In conclusion our weather application provides a comprehensive and user-friendly platform for accessing accurate and up-to-date weather information. With features such as current weather conditions and forecasts the users can plan their activities with confidence and stay informed about changing weather patterns. The air quality information and customizable options enhances the utility and relevance of the application by prioritizing accuracy and user engagement Our weather application aims to be a trusted resource for individuals, businesses, and communities.
